WUD Statement on the State Water Board Remand Order *October 2024*

We appreciate the work of the Central Valley Water Board and State Water Board in developing an updated General Order regarding waste discharge requirements on dairies across the Central Valley. We look forward to reviewing the document and providing thoughtful and practical feedback grounded in the firsthand experience of our members, who are already investing in and implementing new and innovative practices to improve nutrient management on their farms. As we have done in the past, we will work collaboratively with the Water Board to ensure the final Order includes feasible solutions that achieve our shared goal of protecting water quality on dairies across the Valley.
